Foal Deworming Guidelines

- 
- Three months: Panacur
 - Six months (or just before weaning): Panacur
 - Nine months or at weaning: fecal egg count with Equimax or Zimectrin Gold afterward
 - Twelve months: fecal egg count with Ivermectin (if strongyles) or Panacur (if ascarids) afterward
 - Twelve months + 14 days after deworming: fecal egg count reduction test (second fecal to ensure that the drug used is effective on your farm)
